Maintain contact with Emergency Services

Keep essential services operating

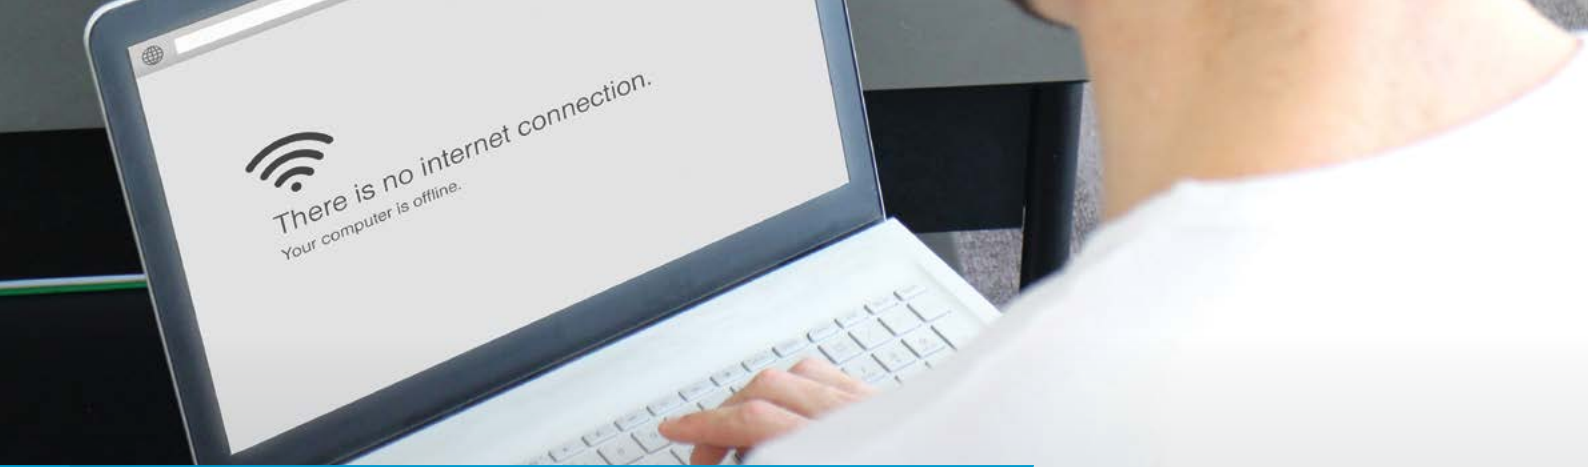

Don't let a disaster stop your business getting paid by your customers

Urgent backup for critical farming processes during a primary network outage

Ideal for large mining and construction operations to keep them operational to manage deadlines and costs

About broadband backup

Flexibility to suit your needs

Whether it's a permanent installation or a fully portable one, our Broadband Backup Service is there to provide that lifeline broadband connection when other services have failed or can't be reached. This flexibility gives you the option to respond quickly to an unplanned event or simply change the way you deploy your workforce based on your business requirements. The solution is designed to provide a broadband connection from anywhere in Australia.

How Broadband Backup works

Broadband Backup services are designed to operate in 'standby' mode until a major outage of the primary network occurs. When your primary is set up to failover to the Broadband Backup service, the Broadband Backup will automatically kick in during the outage and will provide access to either the internet or a private network.

The Broadband Backup service comes with a standard allowance of 5GB per month for operations in 'standby' mode. Usage charges are incurred only when the standard quota is exceeded, with additional data automatically added and charged in 40GB increments.

✓ Always On

5GB/month of data is included in the monthly fee. This means the service can be 'always on' and is able to be tested or used at any time.

✓ High redundancy as standard

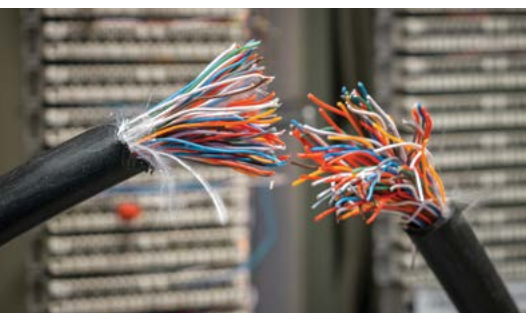

Leverages nbn's dual high-throughput satellites and resilient ground infrastructure with redundancy built into the ground station network and dual points of interconnection (Pols).

✓ Geography

Built upon a reliable network architecture that is designed to deliver readily available solutions, wherever you are in Australia.

✓ Peace of Mind

Provides satellite access to the internet or private networks when it's needed most.
